

SCAFFOLD INDUSTRY ASSOCIATION **SIA**

The Voice of the Scaffold & Access Industry

Competent Person Safety Training (CPT) for Supported and Suspended Scaffold

These courses are available in all three major supported scaffold systems (frame, system and tube & coupler scaffolds), as well as suspended systems. The course for supported scaffold erectors covers all safety aspects regarding scaffold foundations, components, regulations, guardrail requirements, height-to-base ratios, stabilization, erection and dismantling. The suspended course explores set up, counterweight ratios, fall protection, operation and inspection of suspended work platforms. One final exam and three-year competent person designation is included in each course.

Format: Self-study and approximately eight hours of classroom instruction (may vary based on individual instructors).

For a complete list of Accredited Training Institutes (ATIs), visit www.scaffold.org and select the 'Training' link. Custom company classes can also be offered for your employees.

For more information, or to enroll in SIA training courses, contact SIA Headquarters at 816.595.4860 or info@scaffold.org.

Best Practices Reduce Risks

Learn Scaffold Safety Through SIA Training Programs

During its 38-year history, the Scaffold Industry Association (SIA) has provided safety education to thousands of contractors through its renowned seminars and training courses.

Working with legislative agencies, the SIA has helped develop the industry's safety standards. These training courses teach contractors how to meet and exceed those standards with best safety practices, reducing employee injuries and lost time on the job.

SIA Course Offerings Include:

- Scaffold User Safety and Hazard Awareness
- Scaffold Primary Access Training
- Scaffold Competent Person Safety Training (CPT)
- Professional Scaffold Erector Safety Training Challenge Exam
- Suspended Scaffold Hazard Awareness and Operator Safety Training

Training courses are available throughout the year for SIA members and non-members.

The SIA

The primary goals of the SIA are to promote safety through the development of educational training programs, courses and seminars; to promote the scaffold and access industry; and to increase business for each member. The SIA embraces learning through participation and facilitates the processes via its committees and councils, regional meetings, Committee Week and the Annual Conference.
